

Join the new European Association on CO₂ Utilisation

The purpose of the Association is to **coordinate** the many different players involved in CO₂ Utilisation in Europe, to **integrate** their efforts **along the value chain** and to become the **ambassador** of the CO₂ Utilisation community towards policy makers and funders.

What is CO₂ Utilisation?

CO₂ Utilisation is a broad term that covers all industrial processes that can transform CO₂ into a variety of valuable products such as chemical building blocks, synthetic fuels and building materials.

OUR VISION

We believe that CO₂ Utilisation can be one of the major growth areas in Europe's future low carbon economy by:

- *Offering solutions to reduce the carbon footprint of hard-to-decarbonize sectors such as energy-intensive process industries or transportation;*
- *Storing CO₂ permanently in building materials produced by carbonation of mineral waste;*
- *Offering energy storage options which can facilitate the transition of EU energy systems;*
- *Providing revenues to fund the upscaling of carbon capture & storage (CCS) projects.*

OUR MISSION

Promote the development and market deployment of sustainable industrial solutions that convert CO₂ into valuable products, in order to contribute to the net reduction of global CO₂ emissions and to the diversification of the feedstock base.

Who is behind the creation of the Association?

In 2013-2016, the H2020 **Smart CO₂ Transformation** (SCOT) project demonstrated that the development of CO₂ Utilisation can bring **significant benefits for Europe** and its industry. It also concluded that **coordinated collective action** is essential to accelerate its market development.

Building on the strong enthusiasm generated during the SCOT project, the creation of CO₂ Value Europe was prepared in the first half of 2017 by an exceptional consortium composed of the following 29 partners.

Membership is now open
to all organisations interested in the development of CO₂ Utilisation.

Membership fees

- **Full membership** is open to large industrial companies, SMEs and research organisations with manufacturing and/or research activities in Europe
- **Associate membership** is open to research organisations, universities, regional/national clusters, port authorities, collective associations and investors.

	Yearly fee in start-up period (2018-2019)	Yearly fee after first 2 years (2020 and after)
Large companies	€ 15,000	€ 10,000
Other full members	€ 5,000	€ 3,500
Associate members	€ 2,000	€ 1,500

CO₂ VALUE EUROPE

The only association which brings together partners committed to CO₂ utilisation from all industrial sectors across the value chain

3 Strategic objectives

Develop an ambitious and **integrated vision** for CO₂ Utilisation in Europe, drive the preparation of a common **R&I roadmap** with all relevant stakeholders, implement this roadmap with existing **public-private partnerships** (PPPs) such as SPIRE, BBI and Fuel Cells & Hydrogen, and facilitate the emergence of multi-stakeholder **pilot and demonstration projects**.

Raise **awareness** and **acceptance** of CO₂ Utilisation among policy makers, opinion leaders and funders.

Promote the development of appropriate **regulatory framework and market conditions**, through documented position papers and coordinated advocacy actions with other industry associations. Stimulate also increased **public support for R&I** by European Institutions and Member States.

What's in it for me?

Individual benefits:

- Ability to shape the strategic orientations of CO₂ Value Europe
- First-hand access to information (e.g. on projects in preparation and available funding sources)
- Opportunities to share knowledge with other players across the CO₂ Utilisation value chain
- Possibilities to find partners for projects
- Enhanced credibility as member of an innovative community

But also... contributing to the **collective benefits** of the Association, by developing framework conditions which can truly stimulate the development of CO₂ Utilisation such as strong awareness among policy makers, favourable regulations and market policy instruments, or increased public funding for R&I.
